EXPERIENCE	FOCUS	BASED IN	AVAILABILITY
3+ years shipping production web apps	Next.js - TypeScript - Supabase - M-Pesa	Nairobi, Kenya - remote, EAT (UTC+3)	Available for new projects from August 2026

PROFILE

Frontend-leaning full-stack developer with 3+ years building and shipping production Next.js and TypeScript applications, and hands-on experience wiring M-Pesa Daraja (STK Push, C2B paybill, B2C payouts) into real business workflows: school fee collection, e-commerce checkout, vehicle marketplaces and savings-group contributions and payouts. Builds fast, typed, server-first React on Supabase/Postgres with authorisation enforced at the database layer, integrates AI assistants over the Anthropic Claude API, and works from a UI/UX foundation - wireframing and designing in Figma before writing a line of code. Currently reading Computer Science at Umma University while shipping production software for Kenyan SMEs as a freelancer.

CORE COMPETENCIES

Next.js App Router & Server Components	TypeScript (strict, end-to-end typed)	M-Pesa Daraja - STK Push, C2B, B2C
Supabase / PostgreSQL & migrations	Row-Level Security & multi-tenancy	UI/UX design foundations - Figma to code
AI integration (Anthropic Claude API)	Idempotent webhooks & reconciliation	Monorepos & multi-surface deploys
Technical SEO & Core Web Vitals	Accessible interfaces (WCAG AA)	

SELECTED ACHIEVEMENTS

- Shipped six production applications across education, e-commerce, fintech, retail and scheduling - each one live, documented and handed over with a written user guide.
- Designed an append-only payments ledger that made every balance traceable to the M-Pesa transaction behind it, and made every Daraja callback idempotent - removing double-credits, double-disbursements and manual end-of-day reconciliation.
- Built a Claude-powered sales assistant for a car marketplace that answers stock questions from live inventory rather than from a scripted FAQ.

EXPERIENCE

Freelance Full-Stack Developer

2023 - Present

Direct clients - Kenyan SMEs and international

- Design and ship production Next.js, TypeScript and Supabase applications end to end (schema, auth, row-level security, frontend) for Kenyan SMEs across education, e-commerce, fintech, retail and scheduling.
- Integrate M-Pesa Daraja payments (STK Push, C2B paybill, B2C payouts) with idempotent webhook handling, eliminating the double-credit and reconciliation failures common to naive integrations.
- Architect monorepos that deploy a public storefront and an authenticated admin console as separate applications over one database, so customers never load admin code and either surface can be released independently.
- Integrate AI assistants over the Anthropic Claude API, grounding responses in live catalogue and order data so answers reflect real stock rather than a static script.
- Take projects from Figma wireframe through to pixel-faithful implementation, working directly with clients from scope to launch and handing over written user documentation.

SELECTED PROJECTS

AutoHub Marketplace

2026 | E-commerce / Automotive / AI

Car marketplace monorepo - a KES-priced storefront with an AI sales assistant, and a separate admin console for listings and orders.

- AI sales assistant grounded in the live vehicle catalogue - it answers from real stock, price and availability, not a scripted FAQ
- Monorepo shipping two independently deployed apps - customer storefront and dealer admin console - against one shared database

Customer storefront: autohub-marketplace-web.vercel.app

Admin console: autohub-marketplace-admin-p6qn.vercel.app

Next.js

TypeScript

Monorepo

Supabase

Mwangaza Academy

2025 | Education / Fintech

School management system with fee invoicing, M-Pesa paybill reconciliation and SMS notifications.

- Term-based fee structures with automatic per-student invoice generation
- M-Pesa paybill (C2B) integration that matches payments to students by admission number

Live: school-fees-portal-56m9.vercel.app

Next.js

TypeScript

Supabase

React Query

HOROLOGY

2025 | E-commerce / Fintech

Kenya-focused luxury watch monorepo - a KES-priced storefront and a separate admin console, deployed independently.

- Monorepo shipping two independently deployed apps against one shared database
- Storefront: category navigation (Dress, Dive, Chronograph, Smart) with KES-native pricing

Storefront: watchproject-storefront.vercel.app

Admin console: watchproject-admin.vercel.app

Next.js

TypeScript

Monorepo

Supabase

Chama Management Platform

2026 | Fintech / SaaS

Multi-tenant SaaS for savings groups - role-based access, M-Pesa contributions and payouts, subscription billing.

- Multi-tenant architecture - every group's data isolated at the database level
- Role-based access for admin, chairperson, treasurer and member

Live: chama-management-platform-hazel.vercel.app

Next.js

TypeScript

Supabase

React Query

TECHNICAL SKILLS

Frontend	Next.js, React, TypeScript, Tailwind CSS, React Query
Backend & data	Supabase, PostgreSQL, Row-Level Security
Payments & integrations	M-Pesa Daraja, Africa's Talking, Webhooks
Design & UI/UX	Figma, Design systems, Accessibility
AI & mobile	Claude API, React Native, Expo

EDUCATION

BSc Computer Science - Umma University

Kajiado, Kenya | In progress

Languages: English (professional), Kiswahili (native)

References and client introductions available on request.
