

ABDIKARIM

Frontend Developer & Freelancer

Kajiado, Kenya | abdkarimochieng@gmail.com | +254 794 935 317 | github.com/Abdizovic | linkedin.com/in/abdkarim-ochieng

PROFILE

Frontend-leaning full-stack developer specialising in Next.js and TypeScript, with hands-on production experience wiring M-Pesa Daraja (STK Push, C2B paybill, B2C payouts) into real business workflows: school fee collection, e-commerce checkout, and savings-group contributions and payouts. Builds fast, typed, server-first React on Supabase/Postgres with authorisation enforced at the database layer, and designs in Figma before writing a line of code. Currently reading Computer Science at Umma University while shipping production software for Kenyan SMEs as a freelancer.

EXPERIENCE

Freelance Frontend Developer

2024 - Present

Upwork & direct clients

- Design and ship production Next.js, TypeScript and Supabase applications end to end (schema, auth, row-level security, frontend) for Kenyan SMEs across education, e-commerce, fintech and retail.
- Integrate M-Pesa Daraja payments (STK Push, C2B paybill, B2C payouts) with idempotent webhook handling, eliminating the double-credit and reconciliation failures common to naive integrations.
- Take projects from Figma design through to pixel-faithful implementation, working directly with clients from scope to launch.

SELECTED PROJECTS

Mwangaza Academy

2025 | Education / Fintech

School management system with fee invoicing, M-Pesa paybill reconciliation and SMS notifications.

- Term-based fee structures with automatic per-student invoice generation
- M-Pesa paybill (C2B) integration that matches payments to students by admission number

Next.js - TypeScript - Supabase - React Query - Tailwind CSS

HOROLOGY

2025 | E-commerce / Fintech

Kenya-focused luxury watch monorepo - a KES-priced storefront and a separate admin console, deployed independently.

- Monorepo shipping two independently deployed apps against one shared database
- Storefront: category navigation (Dress, Dive, Chronograph, Smart) with KES-native pricing

Next.js - TypeScript - Monorepo - Supabase - React Query

Chama Management Platform

2026 | Fintech / SaaS

Multi-tenant SaaS for savings groups - role-based access, M-Pesa contributions and payouts, subscription billing.

- Multi-tenant architecture - every group's data isolated at the database level
- Role-based access for admin, chairperson, treasurer and member

Next.js - TypeScript - Supabase - React Query - Tailwind CSS

SKILLS

Frontend: Next.js, React, TypeScript, Tailwind CSS, React Query

Backend & data: Supabase, PostgreSQL, Row-Level Security

Payments & integrations: M-Pesa Daraja, Africa's Talking, Webhooks

Mobile & design: React Native, Expo, Figma

EDUCATION

BSc Computer Science - Umma University
