

HOROLOGY - User Guide

Walkthrough of the Watch Co. storefront and the admin console, including demo sign-in details.

Revision 1 - July 2026 | Abdikarim, Frontend Developer & Freelancer

Where to go

Storefront

<https://watchproject-storefront.vercel.app>

The shop customers see. Browsable without an account; you only sign in to keep an order history.

Admin console

<https://watchproject-admin.vercel.app>

Where the shop is run - catalogue, stock and orders. Sign-in required; use the credentials below.

Sign-in details

Admin console

Email: abdkarimochieng@gmail.com
Password: #Abdik2109

Full access to products, inventory and order fulfilment.

Storefront shopper

Account: Not required - browse and check out as a guest

You may create your own shopper account from the Sign in link if you want to see the order-history view.

Please read: These are shared demo accounts on a public deployment. Anyone reading this guide can sign in with them, so treat everything inside as throwaway sample data: do not enter real names, phone numbers, ID numbers or live payment details. Passwords are rotated from time to time - if one stops working, get in touch and I will send the current set.

1. What HOROLOGY is

HOROLOGY is a Kenya-focused luxury watch shop. It is built for how people here actually buy online: every price is quoted in Kenyan Shillings with no currency conversion at the end, and checkout finishes with an M-Pesa prompt on your own phone instead of a card form.

It ships as one monorepo deployed to two separate addresses. Splitting them means the shop stays fast and public while the management screens sit behind their own sign-in on their own domain - a shopper never loads a byte of admin code, and the admin app can be taken down or redeployed without the shop going with it.

- Storefront - the public shop: catalogue, product pages, cart, M-Pesa checkout.

- Admin console - the back office: products, images, pricing, stock levels and order fulfilment.
- Both apps read and write one shared database, so a stock change in admin shows on the shop immediately.

2. Finding a watch on the storefront

Open the storefront address. No sign-in is needed to browse.

1. Use the top navigation to filter the catalogue: All Watches, Dress, Dive, Chronograph or Smart.
2. Or scroll to Shop by Category on the home page and pick from Chronographs, Dive Watches, Dress Watches, Minimalist or Smartwatches.
3. The Featured Watches strip on the home page shows a rotating selection with prices already in Ksh.
4. Click any watch to open its product page - full description, specification, gallery and current stock.

Where a watch is discounted you will see two figures: the sale price first, then the original struck through. The first number is what you pay.

3. Cart and checkout

1. On a product page, press Add to put the watch in your cart. The cart icon in the header shows the running count.
2. Open the cart from the header to change quantities or remove a line. The total updates as you go.
3. Press through to checkout and fill in your delivery details - name, phone number and delivery address.
4. Check the order summary. The figure shown is the exact amount that will appear on your phone; there is no conversion step and no fee added after this screen.
5. Enter the Safaricom number you want to pay from, in the format 07XXXXXXX, and confirm.

Free shipping applies over the threshold shown on the home page, and every watch carries the stated warranty and 30-day return window. Those terms are part of the demo content.

4. Paying with M-Pesa

Checkout uses M-Pesa STK Push (Lipa Na M-Pesa Online). No card details are ever collected, and nothing sensitive is typed into the website - you approve the payment on your own handset with your own PIN.

1. Submit the checkout form. The site sends a payment request to Safaricom and switches to a waiting state.
2. A prompt appears on the phone number you entered, showing the merchant and the exact amount.
3. Enter your M-Pesa PIN on the handset to approve.
4. The site is polling in the background. Once Safaricom confirms, the page moves to the paid state

and your order number is shown. Keep the tab open until then.

- If you ignore the prompt it times out after about a minute and the order is marked failed - nothing is charged and stock is released.
- If you cancel on the handset, the site says so in plain language rather than showing an error code.
- If your balance is short, the order fails cleanly and you can retry from the same cart.

Payments run against the M-Pesa sandbox, not live Safaricom rails. An STK Push prompt will not appear on a real handset and no money moves; the demo simulates the callback so you can follow the full flow end to end.

5. Signing in to the admin console

1. Open the admin address. You land on the Watch Co. Admin sign-in screen (visiting the root redirects you to /login).
 2. Enter the admin email and password from the credentials table at the front of this guide.
 3. Press Sign In. You arrive at the console dashboard.
- Forgot password? sends a reset link - avoid it on the shared demo account, as it changes the password for everyone reading this guide.
 - Create an admin account is for invited staff. It expects an invite, so it is not the route in for a demo visit.

6. Managing the catalogue

The catalogue section is where watches are created and edited. Anything saved here is live on the storefront on the next page load.

1. Open Products from the console navigation to see everything currently listed.
2. Create a new watch, or click an existing one to edit it.
3. Fill in name, brand, category (this drives the storefront navigation), description and specification.
4. Upload images. The first image is the one used on category cards and in the cart.
5. Set the price in Kenyan Shillings. Add a compare-at price if you want the struck-through sale styling on the storefront.
6. Set the stock quantity, then save.

Prices are stored as whole cents rather than decimals, which is why the amount on the product page and the amount on the M-Pesa prompt can never drift apart by a rounding error.

7. Stock and orders

Every order moves through an explicit sequence of states, and the console shows you where each one is. Nothing skips a step.

- Pending - the order exists, payment has not been requested yet.

- Awaiting approval - the STK prompt is on the customer's phone. Stock is held against this order.
 - Paid - Safaricom confirmed. The order is ready to pack.
 - Failed or cancelled - timed out, declined or cancelled. The held stock is released automatically.
1. Open Orders in the console. Filter by state to find what needs attention.
 2. Click an order for the full picture: line items, delivery details, and the M-Pesa receipt for paid orders.
 3. Pack and ship, then mark the order fulfilled. The customer's view updates with it.
 4. Watch Inventory for low-stock items and top them up from the product editor.

8. If something goes wrong

- The M-Pesa prompt never arrived - check the number is a Safaricom line entered as 07XXXXXXXX, then retry from the cart.
- The page is still saying 'waiting for approval' - leave it a moment. If the confirmation is delayed, the console reconciles the order against Safaricom and the correct state wins.
- You were signed out of admin - sessions expire. Sign in again with the same details.
- A product edit is not showing on the shop - reload the storefront page; catalogue pages are cached briefly for speed.
- The admin address shows the sign-in screen again after signing in - clear cookies for the domain and retry.
